

CERTIFICATE OF QUALITY & GMP

It is the policy of Specialbalance Ltd to manufacture all products for internal and external use to agreed standards, acceptable to our customers both in the UK, EU and in the many countries that we export to.

This is achieved by an integrated system of GMP (Good Manufacturing Practice), quality assurance and quality control in order to ensure that the stated product complies with its specification and that the finished product contains the correct ingredients in the correct proportions, is of the purity required, has been properly processed according to the defined procedures and has been packaged correctly.

The responsibility of the Quality Assurance function is to ensure that all products comply with their individual specifications and the finished product is as defined above.

The organisational structure of the quality assurance system is based upon the implementation of GMP, the strict adherence to the defined manufacturing processes and quality control of the starting materials and finished products, with independent microbial and purity analysis to ensure the product is within UK and EU guidelines and in adherence to the purity of the capsules.

Signed

Arthur Spurling, Operations Manager
